

The Future of U.S. Critical Minerals Supply

Forward-looking statements

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

FORWARD-LOOKING INFORMATION

This presentation contains certain forward-looking statements that reflect the current views and/or expectations of Stillwater Critical Minerals Corp. (the “Company”, “Stillwater Critical Minerals”, or “SWCM”) with respect to its business and future events including statements regarding its exploration plans and the Company’s expectations respecting future exploration results, the markets for the minerals underlying the Company’s projects, and growth strategies. Forward-looking statements are based on the then-current expectations, beliefs, assumptions, estimates and forecasts about the business and the markets in which the Company operates. Investors are cautioned that all forward-looking statements involve risks and uncertainties, including: the inherent risks involved in the exploration and development of mineral properties, the uncertainties involved in interpreting drill results and other exploration data, the uncertainties respecting historical resource estimates, the potential for delays in exploration or development activities, the geology, grade and continuity of mineral deposits, the possibility that future exploration, development or mining results will not be consistent with the Company’s expectations, accidents, equipment breakdowns, title and permitting matters, labour disputes or other unanticipated difficulties with or interruptions in operations, fluctuating metal prices, unanticipated costs and expenses, uncertainties relating to the availability and costs of financing needed in the future and regulatory restrictions, including environmental regulatory restrictions. These risks, as well as others, including those set forth in the Company’s filings with Canadian securities regulators, could cause actual results and events to vary significantly. Accordingly, readers should not place undue reliance on forward-looking statements and information. There can be no assurance that forward-looking information, or the material factors or assumptions used to develop such forward looking information, will prove to be accurate. The Company does not undertake any obligations to release publicly any revisions for updating any voluntary forward-looking statements, except as required by applicable securities law.

TECHNICAL INFORMATION

The scientific and technical information in this presentation has been reviewed by the following non-independent qualified persons (as defined in NI 43-101): (a) in respect of the Stillwater West Project, Mike Ostenson, P. Geo., who is a Project Geologist of the Company; and (b) all other projects of Stillwater Critical Minerals, Debbie James, P. Geo, who is an independent consultant to the Company.

Mineral resources which are not mineral reserves do not have demonstrated economic viability. With respect to “indicated mineral resource” and “inferred mineral resource”, there is a great amount of uncertainty as to their existence and a great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of a “measured mineral resource”, “indicated mineral resource” or “inferred mineral resource” will ever be upgraded to a higher category.

CAUTIONARY NOTE TO U.S. INVESTORS REGARDING RESOURCE ESTIMATES

The terms “mineral resource”, “measured mineral resource”, “indicated mineral resource”, “inferred mineral resource” used herein are Canadian mining terms used in accordance with NI 43-101 under the guidelines set out in the Canadian Institute of Mining and Metallurgy and Petroleum (the “CIM”) Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as may be amended from time to time. These definitions differ from the definitions in the United States Securities & Exchange Commission (“SEC”) Industry Guide 7. In the United States, a mineral reserve is defined as a part of a mineral deposit which could be economically and legally extracted or produced at the time the mineral reserve determination is made. While the terms “mineral resource”, “measured mineral resource,” “indicated mineral resource”, and “inferred mineral resource” are recognized and required by Canadian regulations, they are not defined terms under standards in the United States and normally are not permitted to be used in reports and registration statements filed with the SEC. As such, information contained herein concerning descriptions of mineralization and resources under Canadian standards may not be comparable to similar information made public by U.S. companies in SEC filings. Accordingly, information herein containing descriptions of our mineral deposits may not be comparable to similar information made public by US companies subject to the reporting and disclosure requirements under US federal securities laws and the rules and regulations thereunder.

THIRD-PARTY INFORMATION

Where this presentation quotes any information or statistics from any external source, it should not be interpreted that the Company has adopted or endorsed such information or statistics as being accurate. Some of the information presented herein, including scientific and technical information on third-party projects, is based on or derived from statements by third parties, has not been independently verified by or on behalf of the Company and the Company makes no representation or warranty, express or implied, respecting the accuracy or completeness of such information or any other information or opinions contained herein, for any purpose whatsoever. References to third-party projects herein are for illustrative purposes only and are not necessarily indicative of the exploration potential, extent or nature of mineralization, or potential future results of the Company’s projects.

The Need For Domestic Supply of **Critical Minerals**

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

Reliance on imported critical minerals poses a threat to the **national and economic security** of the United States

Most of the world's nickel comes from Indonesia and carries **much higher environmental and humanitarian costs** than nickel sulphide sourced in the first world

China controls 80% of global critical mineral supply (nickel 68%, cobalt 73%, graphite 100%)

The US government set a goal to **cut greenhouse gas emissions in half** by 2030 and reach net zero by 2050

Electrification is driving demand for a variety of metals

Deglobalization and increased domestic manufacturing are also driving commodity demand

The US government is actively funding domestic supply chains for critical minerals to address identified geopolitical risks in supply

The shift to green energy sources is increasing the demand for critical minerals

Vision

Critical Mineral Supply in the USA

The Largest Nickel Project In An Active U.S. Mining District

Stillwater Critical Minerals is focused on advancing world-class resources of **critical minerals** at our flagship Stillwater West Ni-Cu-Co-PGE + Au project in the iconic Stillwater mining district in Montana, USA.

Vision: Become a primary U.S. source of low-carbon critical minerals

Well positioned with world-class geology in an expanding and famously metal-rich US mining district

Nine minerals that have been identified as critical to domestic security and electrification

Success in Advancing Major Mining Projects

Michael Rowley

President & CEO, Director

Co-founder of Stillwater Critical Minerals with over 30 years of executive experience in the exploration, mineral processing, and mine environmental industries.

Danie Grobler, Ph.D.

Vice-President, Exploration

World-recognized expert in battery and platinum group metals. 25+ years experience in global exploration, including Head of Geology and Exploration for Ivanhoe Mines.

Albie Brits, P.Geo.

Senior Geologist

28+ years focused on the advancement of projects from grassroots to production. Former Senior Geologist and Manager Project Geology for Ivanhoe Mines.

Greg Johnson

Executive Chairman

More than 30 years in exploration, development of large-scale mining projects raising over \$650 million in project financing. Co-founder of NovaGold Resources.

Gregor Hamilton

Independent Director

Over 25 years experience in mining sector as a geologist, investment banker and entrepreneur. Global experience in capital markets, M&A and structured finance.

Nora Pincus

Independent Director

15+ years senior experience in mine law and finance focused on global capital markets and M&A. Currently V-P Corp Dev at Empress Royalty and past Managing Dir. at Nebari Partners.

Gordon Toll

Independent Director

Over \$5B raised in the resource industry with 50+ years experience. Past senior roles with Ivanhoe Mines and Fortescue Minerals, BHP Billiton, and Rio Tinto.

Prof. Wolfgang Maier, Ph.D.

Senior Geologic Advisor

25+ years global experience in mafic-ultramafic igneous systems and formation of magmatic ore deposits. 144 publications receiving 5,175 citations to date.

Mike Ostenson, P.Geo.

Managing Geologist, Qualified Person

24+ years experience in the Stillwater district. Senior technical roles for Beartooth Platinum, Stillwater Mining Co. and AngloGold.

Advisory & Corporate Team

Justin Modroo, P.Geo.

Project Geophysicist

24+ years industry experience, including Stillwater Complex work with Premium Exploration and Beartooth Platinum

Harry Burgess, P.Eng.

Advisor, Mining & Mine Engineering

40+ years of mine engineering and management experience including senior positions with Anglo-American and others in Zambia and South Africa. Co-founder of Micon International

Garth Kirkham, P.Geo. P.Geoph.

Advisor, Geology & Mining

34+ years experience in the mineral exploration industry. Founder of Kirkham Geosystems Ltd and was a founding director of Stillwater Critical Minerals

Doug Warkentin, P.Eng.

Advisor, Processing & Metallurgy

30+ years of experience in the mining and mineral processing industries. Currently Senior Metallurgist at Kemetco Research Inc. Co-founder of Stillwater Critical Minerals

Rebecca Moriarty

Chief Financial Officer

Chartered Professional Account with over 20 years experience in mining industry. Formerly Manager with Pricewaterhouse Coopers, focused on mineral resource sector

Susan Henderson

Corporate Secretary

20+ years of experience in the mineral resource sector providing financial analysis, reporting and management support for companies from exploration to development

Chris Ackerman

Communications

10+ years Corporate Development and IR experience, with extensive background in private industry and government. Currently Senior Management with Metallic Group peers, Metallic Minerals Corp. and Granite Creek Copper

FSE: **5D32**

Long history of mineral wealth:

- Oil, gas, coal, and mining are major revenues for the state
- 1852 gold rush
- Dominant North American copper producer by WWI
- Major source of copper, chromium, Platinum Group Elements, gold, silver, other commodities

Rio Tinto partnered with the US Geological Survey for the Earth Mapping Resources Initiative, a large geophysical survey targeting critical minerals including rare earth elements, tellurium, tin, tungsten, also copper, molybdenum, and gold, in 2022

Other recent investments by major mining companies include:

- Ivanhoe at Hog Heaven: \$44.5M for 75% with Brixton Metals
- Rio Tinto at Madison: \$30M to earn 70% with American Pacific

- Five "Platreef-style" (or contact-type) Ni-Cu-Co-PGE+Au deposits
- 1.6 Blbs Ni+Cu+Co + 3.8 Moz PGEs+Au³
- Large 61 km² claim block across 32 km of the lower Stillwater Igneous Complex

1: References to adjoining properties are for illustrative purposes only and are not necessarily indicative of the exploration potential, extent or nature of mineralization or potential future results of the Company's projects.

2: Includes current reserves and resources, and over 15Moz of past production. Based on publicly disclosed production statistics of Sibanye-Stillwater including most recent CPR:

<https://www.sibanyestillwater.com/business/reserves-and-resources/>

3: See news release January 25, 2023. Mineral Resources are reported at cut-off grades of 0.20% NiEq.

Stillwater West

Correct Location in a World-Class Complex

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

Simplified schematic cross-section of the Stillwater Igneous Complex

Area Enlarged Above in Cross-Section

The Stillwater complex shares many similarities with South Africa's Bushveld complex

- The J-M Reef was discovered in the 1970s based on parallels with similar deposits in the Bushveld complex
- Stillwater Critical Minerals is uniquely positioned to expand the "Platreef-in-Montana" model, with demonstrated large-scale and high-grade Ni/Cu sulphide contact-type mineralization across the lower Stillwater complex

Reef Setting

Comparable to the Bushveld's Merensky and UG2 reef deposits

Platreef Setting

- Big, bulk tonnage 'contact-type' Ni/Cu sulphide deposits with PGEs and gold
- Location of Stillwater Critical Minerals' deposits (surface to 400m depth)
- Global examples include the giant mines on the north limb of the Bushveld (or Platreef): **Anglo American's Mogalakwena mine, and Ivanhoe's Platreef mine**

Platreef-style Deposits

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

The World's "Porphyry-Scale" Nickel and PGE Deposits

Platreef-style deposits

The two mines on the Platreef are the largest nickel producers in South Africa and are among the very largest and most profitable nickel and PGE mines in the world.

Anglo American began production at Mogalakwena in 1993, and Ivanhoe Mines' adjacent Platreef mine is nearing production.

The Stillwater Layered Mafic-Ultramafic Complex is among the top five largest in the world and shares many similarities with the South Africa's Bushveld Complex.

The Stillwater West project covers the lower Stillwater Complex and the stratigraphic equivalent of the Platreef district, in Montana.

Multiple Deposits with Kilometer-Scale Expansion Potential

See news release January 25, 2023. Mineral Resources are reported at cut-off grades of 0.20, 0.35, and 0.70% NiEq. Cut-off grades and equivalents are based on metal prices of \$9.00/lb Ni, \$3.75/lb Cu, \$24.00/lb Co, \$1,000/oz Pt, \$2,000/oz Pd and \$1,800/oz Au, with assumed metal recoveries of 80% for Ni, 85% for copper, 80% for Co, Pt, Pd and Au, a mining cost of US\$2.50/t rock and processing and G&A cost of US\$18.00/t mineralized material. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred Resources are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as Indicated or Measured. However, based on the current knowledge of the deposits, it is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.

Soil Geochemistry

Highly anomalous precious and base metal values cover 25km strike in lower Stillwater stratigraphy

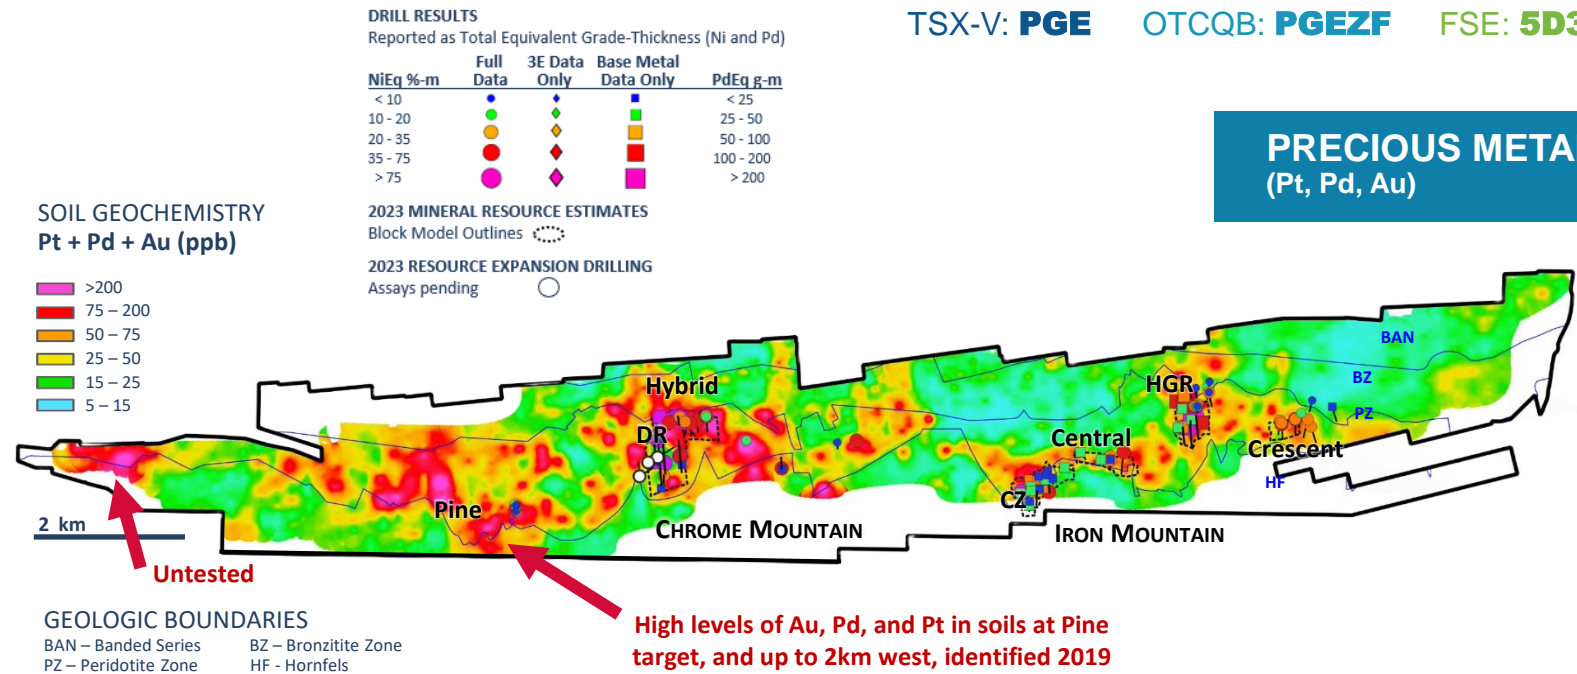

- High levels of platinum, palladium, gold, nickel, copper and other metals in soil geochemistry across very large areas
- Gold, cobalt, chromium and other metals also highly anomalous across large areas
- Strong soil response proximal to known mineralization in deposit areas provide priority targets and demonstrates the effectiveness of soils as an exploration tool at Stillwater, especially in the Peridotite Zone (PZ)
- Four new kilometer-scale soil anomalies identified (untested to date) in 2019, including expansion of highly anomalous gold in soils at Pine target area
- Strong spatial correlation with broad, high-level electro-magnetic conductor anomalies

FSE: **5D32**

2024 & Beyond

2023

- 2023 drill results
- Kluane project updates
- Heritage Mining updates
- Resource update
- 2024 expansion plans
- Metallurgical studies

2022

- Second resource estimate
- Glencore investment
- Expansion drill campaign
- Cornell University / DoE funding
- Board addition

2021

- Key additions to technical team
- Channel sampling program
- Refinement of geologic model
- Gravity survey

2019 - 2020

- Drill programs
- First IP survey
- Confirm Platreef model
- Collaboration with GoldSpot
- 3D model over core area
- Expansion of land package

2017 - 2018

- Initial acquisition
- Property consolidation
- Data consolidation
- Compilation and modeling
- Initial field programs
- Collaboration with USGS

- Inaugural resource estimates
- Expansion drill campaign
- Expanded IP survey
- Earn-in agreement by Heritage on Drayton-Black Lake

2023 Mineral Resource Estimate with 3D Model of IP Geophysical Survey Results

- Chargeability anomaly at ≥ 45 mV/V cut-off
- Conductivity anomaly at ≤ 100 ohm-meter cut-off
- NI43-101 deposit at 0.20% NiEq cut-off (0.62 g/t PdEq)
- IP Geophysical Survey Lines

See news release January 25, 2023. Mineral Resources are reported at cut-off grades of 0.20, 0.35, and 0.70% NiEq. Cut-off grades and equivalents are based on metal prices of \$9.00/lb Ni, \$3.75/lb Cu, \$24.00/lb Co, \$1,000/oz Pt, \$2,000/oz Pd and \$1,800/oz Au, with assumed metal recoveries of 80% for Ni, 85% for copper, 80% for Co, Pt, Pd and Au, a mining cost of US\$2.50/t rock and processing and G&A cost of US\$18.00/t mineralized material. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred Resources are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as Indicated or Measured. However, based on the current knowledge of the deposits, it is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.

Earn-In Deal With Heritage Mining on High-Grade Gold Project in Active Rainy River District

OVERVIEW

- 142 km² land package adjoining Treasury Metals' +3Moz Goliath Gold Complex
- 30km of underexplored Archean greenstone strike
- Well-defined, near-term drill targets over four zones, based on over 100 years of exploration data from 176 diamond drill holes totaling approximately 20km
- Direct road access, close to rail and power
- Discovery and development of Rainy River lead the district in the 1990s, which is now over 14Moz and growing

EARN-IN WITH HERITAGE MINING

- Definitive agreement (as amended) signed November 2021 grants Heritage right to earn up to a 90% interest over four years by:
 - Issuing 13.45M shares and 6M warrants, plus \$170,000 cash
 - Completing \$5M in exploration
 - Granting SWCM a 10% carried interest through Feasibility Study
 - Paying up to \$10M in discovery bonuses at \$1/oz Au or AuEq

Kluane PGE-Ni-Cu project

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

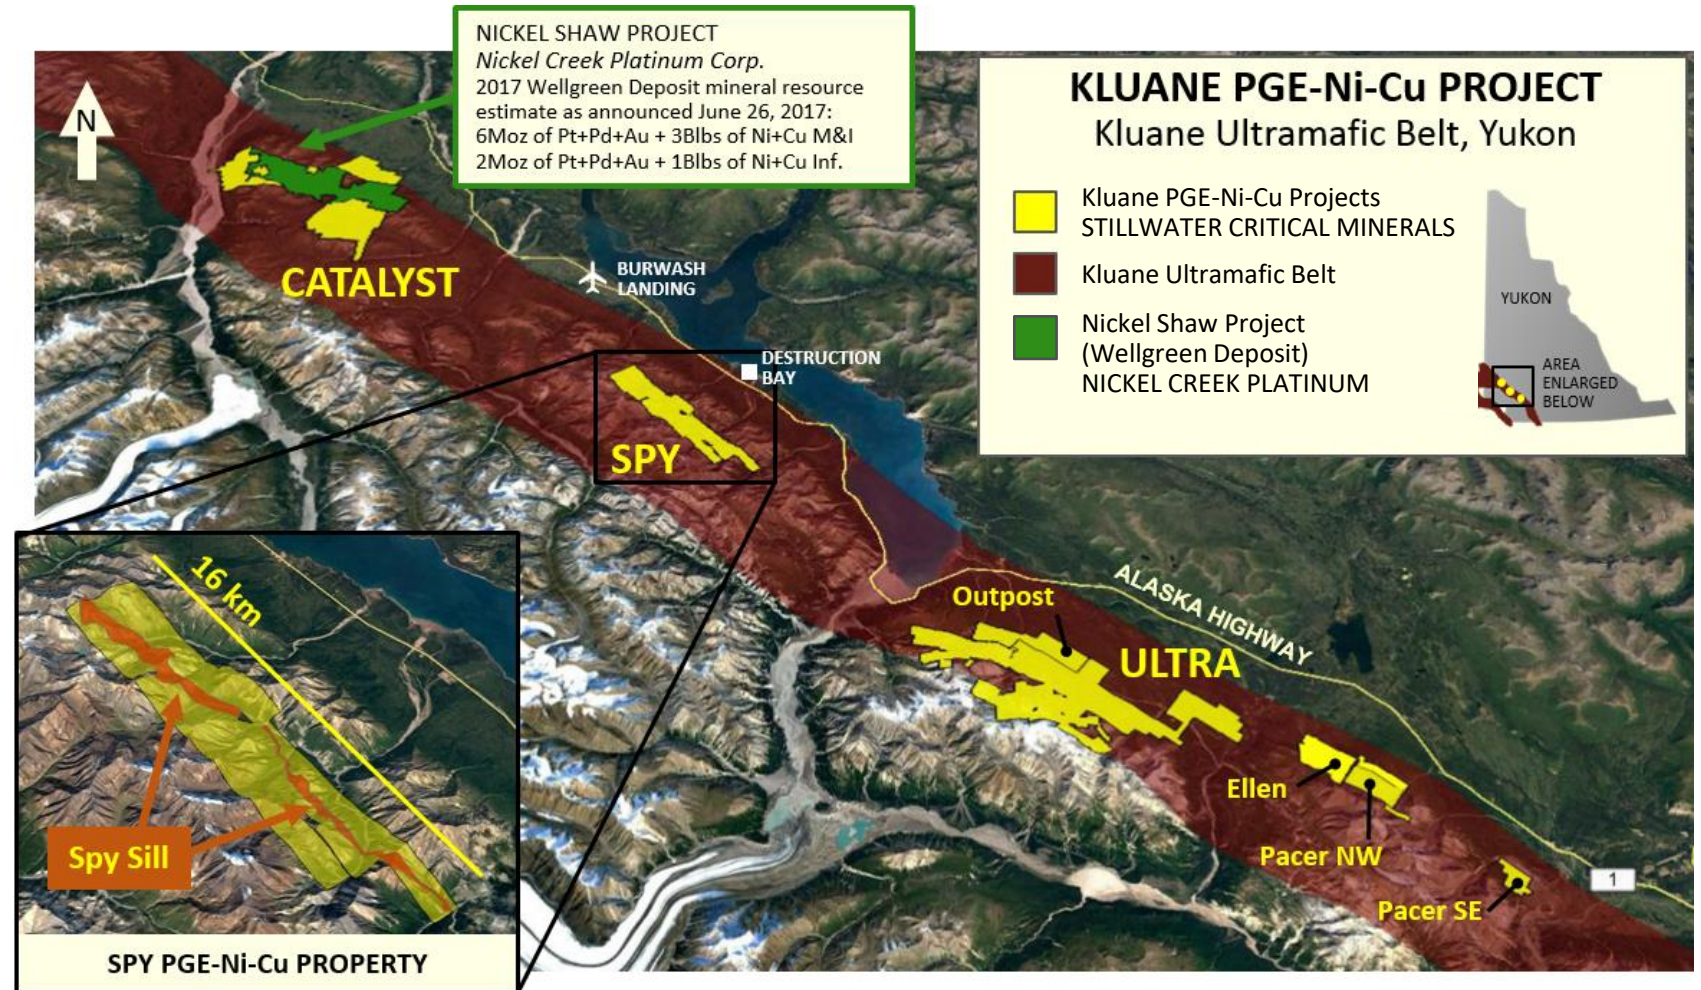

Premier land position in an emerging, world-class Canadian PGE-Ni-Cu district

OVERVIEW

- Kluane Mafic-Ultramafic belt extends 600 km from northern British Columbia to central Alaska and hosts known PGE-Ni-Cu deposits
- 100% ownership in four claim blocks
- The multi-million-ounce Wellgreen PGE-Ni-Cu-Co deposit demonstrates the world-class potential of the belt
- Similar geology to largest known PGE-Ni-Cu deposits including the Bushveld and Stillwater complexes

NEAR-TERM PRIORITY

- Continue ongoing discussions re best avenue to monetize asset
- Undertake modest surface exploration program to expand known mineralization, refine targets

Other Assets

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **5D32**

Duke Island (SE Alaska)

Significant Cu-Ni-PGE asset available for deal

- 100% owned
- Significantly elevated Cu, Ni, and Fe relative to most Ural–Alaska complexes
- up to 1.95% Cu, 0.25% Ni and 1g/t combined PGEs in mafic/ultramafic host rocks
- Past drilling has encountered up to 387 feet of disseminated and semi massive sulfide mineralization with Cu and Ni grades
- Multiple targets - only the Marquis target has been partially tested by drilling

Airborne and surface geophysical surveys indicate a possible feeder dike at depth has not yet been penetrated by deep drilling

Yankee-Dundee Mine (SE British Columbia)

Potential Royalty Revenues, Back-in Rights

- Stillwater consolidated the historic Ymir Camp, once the largest silver producer in the British Commonwealth
- Total production 883,000 tonnes @ 10g/t Au and 60g/t Ag (over \$500M gross today)
- Property was sold in 2013 for:
 - \$50,000 annual Advance Royalty payments
 - \$1.5M production payments plus 2.5% royalty
 - \$4M total buy-out on royalties and production payments
- Stillwater maintains a back-in right for the property

The Yankee Girl Mine Mill, Wildhorse Adit, and Ymir Mine
